

MONEY MARKET

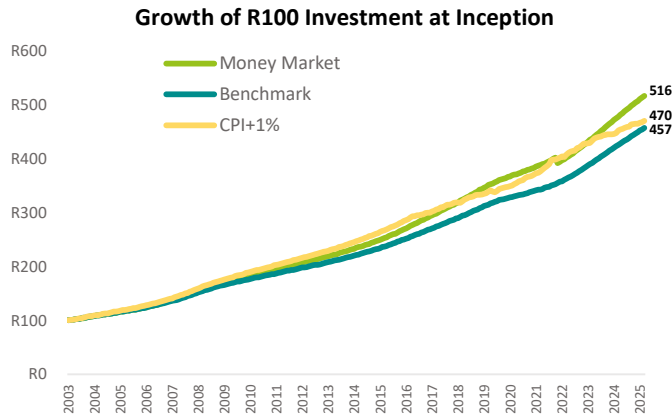

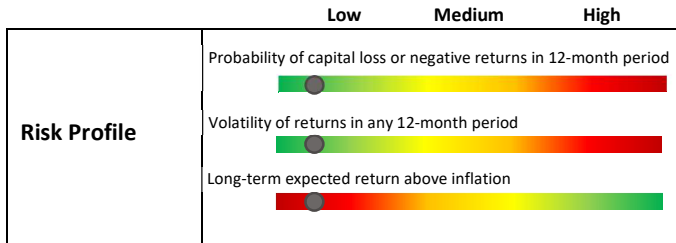

PORTFOLIO FACTSHEET

28 FEBRUARY 2026

INVESTMENT CHOICE:
Low risk/return profile

Objective	This portfolio is designed to deliver (but does not guarantee) a net investment return of 1.0% per annum above CPI over the long-term. This portfolio is appropriate for members wishing to avoid market volatility over the very short-term. It is not appropriate for medium to long-term investment horizons.

EXPLANATORY NOTES

Cost Disclosure:

Total Retirement Savings Charges comprise of four components:

- **Investment Charges:** Investment management fees, including all charges of underlying investment funds and transaction costs.
- **Advice Charges:** Advice fees, including investment consulting fees not included in investment charges.
- **Admin Charges:** Administration costs, which in Sentinel's self-administered model, includes personnel, information technology and operational costs (includes member & pensioner communication, counselling and advice).
- **Other Charges:** Other costs and fees including legal, professional & consulting fees, audit fees, board fees, FSCA levies, insurance, actuarial fees and reporting costs.

Investment returns: returns reported are after Total Retirement Savings Charges have been deducted. In order to calculate the 1-year **gross** investment return, the 1-year total charges should be added to the 1-year net investment return.

Glossary

Annualised Volatility	Also known as standard deviation and measures risk. The higher the standard deviation the higher the risk.

CPI:	South African headline Consumer Price Inflation as publish by Statistics South Africa
Information Ratio:	The Information Ratio measures a portfolios ability to generate excess returns relative to a benchmark per unit of relative risk. The higher the ratio the better.
Maximum Drawdown:	Maximum Drawdown refers to the highest percentage of continuous loss (or negative returns) since the inception of the fund.
Net Returns:	Investment returns after all costs have been considered
Sharpe Ratio:	The Sharpe Ratio is the excess return over the risk-free rate (cash return) generated per unit of risk in the portfolio. The higher the Sharpe Ratio the more return you get for risk taken.
Tracking Error:	Tracking Error is the difference between the return on a portfolio and the benchmark. This is also known as active risk.
Sharpe Ratio:	The Sharpe Ratio is the excess return over the risk-free rate (cash return) generated per unit of risk in the portfolio. The higher the Sharpe Ratio the more return you get for risk taken.
